

Portfolio Compass

November 6, 2013

Navigating the Markets

The *Portfolio Compass* provides a snapshot of LPL Financial Research's views on equity & alternative asset classes, the equity sectors, and fixed income. This biweekly publication illustrates our current views and will change as needed over a three- to 12-month time horizon.

Reading the *Portfolio Compass*

Fundamental, technical, and valuation characteristics for each category are shown by colored squares.

Negative, neutral, or positive views are illustrated by a solid black bar positioned over the color scale, while an outlined black bar with an arrow indicates change and shows the previous view.

Rationales for our views are provided beneath each category.

Compass Changes

- Upgraded mid growth to neutral/positive from neutral.
- Upgraded consumer discretionary to positive from neutral/positive.
- Downgraded long-term munis to neutral/positive from positive.
- Downgraded TIPS to negative/neutral from neutral.

Investment Takeaways

- We expect the S&P 500 Index to grind higher through year-end, supported by durable U.S. economic growth, accommodative Federal Reserve (Fed) policy, and earnings gains.
- Our positive small cap view reflects our U.S. focus and potential to capture further stock market gains.
- We expect bond prices and yields to be largely range-bound through year-end.
- We downgraded TIPS following a recent rebound.
- We downgraded long-term municipals following September and October improvement.
- Higher-yielding, fundamentally sound segments of the bond market such as high-yield bonds, bank loans, and preferred securities remain among the more attractive fixed income options.
- From a technical perspective, the S&P 500 Index price continues to make new all-time highs, establishing a new bullish price objective at 1780.

All performance referenced herein is as of November 5, 2013, unless otherwise noted.

Broad Asset Class Views

LPL Financial Research's views on stocks, bonds, cash, and alternatives are illustrated below. The positions of negative, neutral, or positive are indicated by the solid black compass needle, while an outlined needle shows a previous view.

Equity & Alternative Asset Classes

Favor Small Caps for U.S. Focus and Potential for Further Stock Market Gains

- We expect the S&P 500 Index to continue to grind higher over the balance of the year, supported by durable U.S. economic growth, accommodative Fed policy, and earnings gains.
- Following our recent small cap upgrade, we are upgrading our mid growth view, which we favor for consumer-focused cyclical equity sector exposure and the potential to capture further stock market gains.
- We favor U.S. stocks relative to emerging markets (EM) and developed foreign, as Europe struggles to grow, and the growth trajectory in several key EM countries has deteriorated. The recent pickup in China's growth is encouraging.
- We maintain a preference for growth over value due to growth's tendency to outperform in slow-growth environments and our positive consumer discretionary view.
- We believe further downside to crude oil (WTI) may be limited in the near term from a technical perspective, though the latest inventory data and relative calm in the Middle East are bearish.
- The potential for the Fed not to taper its bond purchases until after the New Year may provide near-term support for gold.

		Fundamentals	Technicals	Valuations	Negative	Neutral	Positive	
Style/Capitalization	Large Growth	■	■	■				
	Large Value	■	■	■				
	We have become more positive on small caps at the expense of large in recent weeks. We continue to favor growth, which tends to perform better in slow-growth environments.							
	Mid Growth	■	■	■				
	Mid Value	■	■	■				
	We upgraded our mid growth view for consumer-focused cyclical equity sector exposure and potential for more up capture. Mid is growing earnings faster than large and may benefit from more acquisitions.							
	Small Growth	■	■	■				
	Small Value	■	■	■				
Our recently upgraded small cap view reflects our U.S. focus and potential for greater up-capture should stocks continue to move higher, though valuations and potential stock market volatility are risks.								
Region	U.S. Stocks	■	■	■				
	Large Foreign	■	■	■				
	Small Foreign	■	■	■				
	Emerging Markets	■	■	■				
We favor the U.S. over large foreign and EM. Europe's growth outlook remains challenged, while growth trajectories in several key EM economies are deteriorating, although recent signs of stabilization in China are worth noting.								
REITs	■	■	■					
Valuations and technicals have both improved. We are watching fundamentals for a potential upgrade.								
Commodities	Industrial Metals	■	■	■				
	Precious Metals	■	■	■				
	Energy	■	■	■				
	Agricultural	■	■	■				
We believe further downside to crude oil (WTI) may be limited in the near term from a technical perspective, though the latest inventory data and relative Middle East calm are bearish. The potential for the Fed not to taper its bond purchases until after the New Year may provide near-term support for gold.								
Other	Non-Correlated Strategies							
Favor long/short equity vehicles as the market is rewarding fundamentals. High corporate cash levels and industry shifts create opportunities for shareholder activism. Global macro strategies have been underperforming but may provide diversification benefits in the event of a pullback.								

Global Macro strategies risk include but are not limited to imperfect knowledge of macro events, divergent movement from macro events, loss of principal, and related geopolitical risks.

Real Estate/REITs may result in potential illiquidity and there is no assurance the objectives of the program will be attained. The fast price swings of commodities will result in significant volatility in an investor's holdings. International and emerging markets involve special risks such as currency fluctuation and political instability. The price of small and mid-cap stocks are generally more volatile than large cap stocks. Value investments can perform differently from the market as a whole. They can remain undervalued by the market for long periods of time. Precious metal investing is subject to substantial fluctuation and potential for loss. These securities may not be suitable for all investors. Alternative strategies may not be suitable for all investors and should be considered as an investment for the risk capital portion of the investor's portfolio. The strategies employed in the management of alternative investments may accelerate the velocity of potential losses. Stock investing may involve risk including loss of principal.

Equity Sectors

Maintain Preference for U.S.- and Consumer-Focused Cyclical Sectors

- We continue to favor the more U.S.-focused, consumer-oriented sectors over the global, export-focused sectors.
- Our consumer discretionary view remains positive as spending continues to increase, albeit modestly, and the housing recovery continues despite higher mortgage rates.
- Our financials view is neutral. We see the U.S. focus, earnings gains, and valuations as positives, though slowing mortgage activity and weak trading volumes have weighed on the group some this earnings season.
- Our modestly positive health care view reflects our U.S. focus, robust pace of product innovation, and demand uptick from the Affordable Care Act (ACA).
- The materials sector is one to watch for a potentially more positive view due to positive technicals and signs of stabilization in China.
- We expect a potential pickup in business spending and improving growth in China to help industrials sector performance.
- We remain cautious on telecom and utilities due to their interest rate sensitivity, though valuations have become more reasonable in recent months.
- Our recent downgrade in our consumer staples view was driven by above-average valuations and weakening technicals, but lower oil prices help the outlook.

	Fundamentals	Technicals	Valuations	Negative	Neutral	Positive	S&P 500 Weight (%)	
Cyclical	Materials	■	■	■				3.5
	A sector to watch due to positive technicals and improved growth outlook in China.							
	Energy	■	■	■				10.5
	Further downside risk to oil prices may be limited on latest news out of the Middle East and inventories.							
	Industrials	■	■	■				10.8
	Housing and U.S. energy buildout help, but businesses remain cautious; government shutdown didn't help.							
	Consumer Discretionary	■	■	■				12.5
	Solid earnings, wealth effect (stocks, homes), job gains, and domestic focus offset rich valuations.							
	Technology	■	■	■				17.8
Positive bias amid attractive valuations, improving technicals, and favorable seasonality.								
Defensive	Financials	■	■	■				16.0
	U.S. focus, earnings gains, and valuations offset regulatory risk, trading softness, and mortgage weakness.							
	Utilities	■	■	■				3.1
	Interest rate risk and slow growth are concerns, but valuations have fallen to reasonable levels.							
	Health Care	■	■	■				13.1
	Below-market earnings growth but U.S. focus, innovation, and ACA-related demand are positives.							
Consumer Staples	■	■	■				10.2	
We continue to favor cyclical sectors, and technicals are weak, but lower oil prices should help.								
Telecommunications	■	■	■				2.5	
Reasonable valuations despite strong earnings season gains; interest rate and business risks remain.								

Because of their narrow focus, sector investing will be subject to greater volatility than investing more broadly across many sectors and companies.

Fixed Income

A New Yield Range

- After rebounding further in October, we find bond valuations roughly fair and expect bond prices and yields to be largely range-bound between now and year-end 2013.
- A modest rise in yields to start November shows the bond market remains sensitive to tapering fears, but clarity from economic data, Washington, and the Fed may take months to become evident.
- We believe intermediate-maturity bonds provide a better risk/return trade-off compared to short-term bonds.
- We downgraded long-term municipals slightly following September and October improvement.
- We find high-yield municipal bonds attractive, but high-quality municipal bonds possess more attractive valuations and compelling taxable-equivalent yields.

		Fundamentals	Technicals	Valuations	Negative	Neutral	Positive	
Tax-Free Bonds	Munis-Short-Term	■	■	■	[Gauge: Needle in Negative zone]			
	Muni curve is steep, and short-term valuations are unattractive.							
	Munis-Intermediate-Term	■	■	■	[Gauge: Needle in Neutral zone]			
	May move in sympathy with Treasuries following October improvement.							
	Munis-Long-Term	■	■	■	[Gauge: Needle in Positive zone]			
	Supply pressures are easing, and valuations remain attractive.							
Munis-High-Yield	■	■	■	[Gauge: Needle in Neutral zone]				
Defaults remain isolated despite Detroit.								

continued on next page

For the purposes of this publication, intermediate-term bonds have maturities between three and 10 years, and short-term bonds are those with maturities of less than three years.

All bonds are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and are subject to availability and change in price. High-yield/junk bonds are not investment-grade securities, involve substantial risks, and generally should be part of the diversified portfolio of sophisticated investors. Municipal interest income may be subject to the alternative minimum tax. Federally tax-free but other state and local taxes may apply. Corporate bonds are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate and credit risk as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity, and redemption features.

Fixed Income (CONT.)

A New Yield Range

- We downgraded TIPS following a recent rebound and our general preference to avoid Treasuries.
- Higher-yielding, fundamentally sound segments of the bond market such as high-yield bonds, bank loans, and preferred securities remain among the more attractive fixed income options.
- Among high-quality bonds, we favor investment-grade corporate bonds due to the combination of higher yields and good fundamentals.

	Fundamentals	Technicals	Valuations	Negative	Neutral	Positive	
Taxable Bonds – U.S.	Treasuries	■	■	■	■	■	
	Valuations are fair, and Fed rate hike expectations are balanced.						
	TIPS	■	■	■	■	■	■
	More sensitive to bond purchases and prospects of Fed tapering.						
	Mortgage-Backed Securities	■	■	■	■	■	■
	Valuations are fair-to-expensive but benefit from continued Fed purchases.						
	Investment-Grade Corporates	■	■	■	■	■	■
	Yield spreads are fair. Credit quality is stable.						
	Preferred Securities	■	■	■	■	■	■
	Good income generator. Bank credit quality is still improving.						
Taxable Bonds – Foreign	High-Yield Corporates	■	■	■	■	■	
	Credit quality metrics are good, valuations are fair, and defaults are on pace to be low in 2013.						
	Bank Loans	■	■	■	■	■	■
	Attractive due to short-term nature and attractive yield.						
	Foreign Bonds – Hedged	■	■	■	■	■	■
	Yields are low compared to domestic bonds.						
Foreign Bonds – Unhedged	■	■	■	■	■	■	
Still-low yields and euro currency risk are concerns.							
Emerging Market Debt	■	■	■	■	■	■	
Improving economic data, attractive valuations, and Fed inaction are positives.							

All bonds are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and are subject to availability and change in price. High-yield/junk bonds are not investment-grade securities, involve substantial risks, and generally should be part of the diversified portfolio of sophisticated investors. Mortgage-backed securities are subject to credit, default risk, prepayment risk that acts much like call risk when you get your principal back sooner than the stated maturity, extension risk, the opposite of prepayment risk, and interest rate risk. International and emerging market investing involves risks such as currency fluctuation and political instability and may not be suitable for all investors. Bank loans are loans issued by below investment-grade companies for short term funding purposes with higher yield than short-term debt and involve risk. Treasury inflation-protected securities (TIPS) help eliminate inflation risk to your portfolio as the principal is adjusted semiannually for inflation based on the Consumer Price Index - while providing a real rate of return guaranteed by the U.S. government. Corporate bonds are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate and credit risk as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity and redemption features. Foreign Bonds – Hedged: Non-U.S. fixed income securities generally from investment-grade issuers in developed countries, with hedged currency exposure. Foreign Bonds – Unhedged: Non-U.S. fixed income securities normally denominated in major foreign currencies.

DEFINITIONS:

EQUITY AND ALTERNATIVES ASSET CLASSES

Large Growth: Stocks in the top 70% of the capitalization of the U.S. equity market are defined as Large Cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Large Value: Stocks in the top 70% of the capitalization of the U.S. equity market are defined as Large Cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Mid Growth: The U.S. mid-cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the total capitalization of the U.S. equity market. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Mid Value: The U.S. Mid Cap range for market capitalization typically falls between \$1 billion and \$8 billion and represents 20% of the total capitalization of the U.S. equity market. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

Small Growth: Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as Small Cap. Growth is defined based on fast growth (high growth rates for earnings, sales, book value, and cash flow) and high valuations (high price ratios and low dividend yields).

Small Value: Stocks in the bottom 10% of the capitalization of the U.S. equity market are defined as Small Cap. Value is defined based on low valuations (low price ratios and high dividend yields) and slow growth (low growth rates for earnings, sales, book value, and cash flow).

U.S. Stocks: Stock of companies domiciled in the U.S.

Large Foreign: Large-cap foreign stocks have market capitalizations greater than \$5 billion. The majority of the holdings in the large foreign category are in the MSCI EAFE Index.

Small Foreign: Small-cap foreign stocks typically have market capitalizations of \$250M to \$1B. The majority of the holdings in the small foreign category are in the MSCI Small Cap EAFE Index.

Emerging Markets: Stocks of a single developing country or a grouping of developing countries. For the most part, these countries are in Eastern Europe, Africa, the Middle East, Latin America, the Far East and Asia.

REITs: REITs are companies that develop and manage real-estate properties. There are several different types of REITs, including apartment, factory-outlet, health-care, hotel, industrial, mortgage, office, and shopping center REITs. This would also include real-estate operating companies.

Commodities – Industrial Metals: Stocks in companies that mine base metals such as copper, aluminum and iron ore. Also included are the actual metals themselves. Industrial metals companies are typically based in North America, Australia, or South Africa.

Commodities – Precious Metals: Stocks of companies that do gold- silver-, platinum-, and base-metal-mining. Precious-metals companies are typically based in North America, Australia, or South Africa.

Commodities – Energy: Stocks of companies that focus on integrated energy, oil & gas services, oil & gas exploration and equipment. Public energy companies are typically based in North America, Europe, the UK, and Latin America.

Merger Arbitrage is a hedge fund strategy in which the stocks of two merging companies are simultaneously bought and sold to create a riskless profit. A merger arbitrageur looks at the risk that the merger deal will not close on time, or at all. Because of this slight uncertainty, the target company's stock will typically sell at a discount to the price that the combined company will have when the merger is closed. This discrepancy is the arbitrageur's profit.

Long/Short is an investment strategy generally associated with hedge funds. It involves buying long equities that are expected to increase in value and selling short equities that are expected to decrease in value.

EQUITY SECTORS

Materials: Companies that engage in a wide range of commodity-related manufacturing. Included in this sector are companies that manufacture chemicals, construction materials, glass, paper, forest products and related packaging products, metals, minerals and mining companies, including producers of steel.

Energy: Companies whose businesses are dominated by either of the following activities: The construction or provision of oil rigs, drilling equipment and other energy-related service and equipment, including seismic data collection or the exploration, production, marketing, refining and/or transportation of oil and gas products, coal and consumable fuels.

Industrials: Companies whose businesses: Manufacture and distribute capital goods, including aerospace and defense, construction, engineering and building products, electrical equipment and industrial machinery; provide commercial services and supplies, including printing, employment, environmental and office services; provide transportation services, including airlines, couriers, marine, road and rail, and transportation infrastructure.

Consumer Discretionary: Companies that tend to be the most sensitive to economic cycles. Its manufacturing segment includes automotive, household durable goods, textiles and apparel, and leisure equipment. The service segment includes hotels, restaurants and other leisure facilities, media production and services, consumer retailing and services and education services.

Technology: Companies that primarily develop software in various fields such as the Internet, applications, systems and/or database management and companies that provide information technology consulting and services. Technology hardware & equipment include manufacturers and distributors of communications equipment, computers and peripherals, electronic equipment and related instruments, and semiconductor equipment and products.

Financials: Companies involved in activities such as banking, consumer finance, investment banking and brokerage, asset management, insurance and investment, and real estate, including REITs.

Utilities: Companies considered electric, gas or water utilities, or companies that operate as independent producers and/or distributors of power.

Health Care: Companies in two main industry groups: Healthcare equipment and supplies or companies that provide healthcare-related services, including distributors of healthcare products, providers of basic healthcare services, and owners and operators of healthcare facilities and organizations or companies primarily involved in the research, development, production and marketing of pharmaceuticals and biotechnology products.

Consumer Staples: Companies whose businesses are less sensitive to economic cycles. It includes manufacturers and distributors of food, beverages and tobacco, and producers of non-durable household goods and personal products. It also includes food and drug retailing companies.

Telecommunications: Companies that provide communications services primarily through a fixed line, cellular, wireless, high bandwidth and/or fiber-optic cable network.

FIXED INCOME

Credit Quality: An individual bond's credit rating is determined by private independent rating agencies such as Standard & Poor's, Moody's and Fitch. Their credit quality designations range from high ('AAA' to 'AA') to medium ('A' to 'BBB') to low ('BB', 'B', 'CCC', 'CC' to 'C').

Duration: A measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years. Rising interest rates mean falling bond prices, while declining interest rates mean rising bond prices. The bigger the duration number, the greater the interest-rate risk or reward for bond prices.

Munis – Short-term: Bonds issued by various state and local governments to fund public projects. The income from these bonds is generally free from federal taxes. These bonds generally have maturities of less than three years.

Munis – Intermediate: Bonds issued by various state and local governments to fund public projects. The income from these bonds is generally free from federal taxes. These bonds generally have maturities of between 3 and 10 years.

Munis – Long-term: Bonds issued by various state and local governments to fund public projects. The income from these bonds is generally free from federal taxes. These bonds generally have maturities of more than 10 years.

Munis – High-yield: Bonds issued by various state and local governments to fund public projects. The income from these bonds is generally free from federal taxes. These bonds generally offer higher yields than other types of bonds, but they are also more vulnerable to economic and credit risk. These bonds are rated BB+ and below.

Treasuries: A marketable, fixed-interest U.S. government debt security. Treasury bonds make interest payments semi-annually and the income that holders receive is only taxed at the federal level.

TIPS (Treasury Inflation Protected Securities): A special type of Treasury note or bond that offers protection from inflation. Like other Treasuries, an inflation-indexed security pays interest every six months and pays the principal when the security matures. The difference is that the underlying principal is automatically adjusted for inflation as measured by the consumer price index (CPI).

Mortgage-Backed Securities: A type of asset-backed security that is secured by a mortgage or collection of mortgages. These securities must also be grouped in one of the top two ratings as determined by a accredited credit rating agency, and usually pay periodic payments that are similar to coupon payments. Furthermore, the mortgage must have originated from a regulated and authorized financial institution.

Investment-Grade Corporates: Securities issued by corporations with a credit rating of BBB- or higher. Bond rating firms, such as Standard & Poor's, use different designations consisting of upper- and lower-case letters 'A' and 'B' to identify a bond's investment-grade credit quality rating. 'AAA' and 'AA' (high credit quality) and 'A' and 'BBB' (medium credit quality) are considered investment-grade.

Preferred Stocks: A class of ownership in a corporation that has a higher claim on the assets and earnings than common stock. Preferred stock generally has a dividend that must be paid out before dividends to common stockholders and the shares usually do not have voting rights.

High-Yield Corporates: Securities issued by corporations with a credit rating of BB+ and below. These bonds generally offer higher yields than investment-grade bonds, but they are also more vulnerable to economic and credit risk.

Bank Loans: In exchange for their credit risk, these floating-rate bank loans offer interest payments that typically float above a common short-term benchmark such as the London interbank offered rate, or LIBOR.

Foreign Bonds – Hedged: Non-U.S. fixed income securities generally from investment-grade issuers in developed countries, with hedged currency exposure.

Foreign Bonds – Unhedged: Non-U.S. fixed income securities normally denominated in major foreign currencies.

Emerging Market Debt: The debt of sovereigns, agencies, local issues, and corporations of emerging markets countries and subject to currency risk.

IMPORTANT DISCLOSURES

The opinions voiced in this material are for general information only and are not intended to provide or be construed as providing specific investment advice or recommendations for any individual. To determine which investments may be appropriate for you, consult your financial advisor prior to investing. All performance referenced is historical and is no guarantee of future results. All indexes are unmanaged and cannot be invested into directly.

Past performance is no guarantee of future results.

Stock investing involves risk including loss of principal.

Preferred stock investing involves risk, which may include loss of principal.

Distressed investing involves significant risks, including a total loss of capital. The risks associated with distressed investing arise from several factors including: limited diversification, the use of leverage, limited liquidity, and the possibility that investors may be required to accept cash or securities with a value less than their original investment and/or may be required to accept payment over an extended period of time.

The Standard & Poor's 500 Index is a capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

Quantitative easing is a government monetary policy occasionally used to increase the money supply by buying government securities or other securities from the market. Quantitative easing increases the money supply by flooding financial institutions with capital in an effort to promote increased lending and liquidity.
